

PERSONAL COMFORT AT EVERY STAGE OF LIFE

MEDIC ASSISTANT.

SYSTEM FOR PEOPLE WITH REDUCED MOBILITY

Your satisfaction is the best recommendation

A specially adapted pre-wall installation system for people with reduced mobility has been tested for long time by Internal Gastroenterology Clinic of the University Hospital Brno.

„The evaluation report on the use of MEDIC ASSISTANT published by the hospital was very positive, which pleased us,” said František Fabičovic, General Director of Alcaplast, that donated the module to the hospital.

„I have recently undergone a hip joint surgery, so I know how difficult it is to deal with an limited movement,” said Roman Kraus, the director of the University Hospital Brno.

System for people with reduced mobility is equipped with an electric linear drive, which allows you to adjust the height of the toilet bowl in the range up to 30 cm.

„The system has a load capacity of 400 kilograms. Which is significantly more than at the competitors. The module also includes two folding handles with integrated electronic control panel,” said General Director František Fabičovic.

For a higher quality of life

Life brings different periods in which we must rely on the help of others. Whether after an accident, a surgery or in old age.

Medic Assistant facilitates the toileting self-help and allows the user to stay longer in a familiar home environment. It is a long-term solution for independent and quality life.

Comfort for patients and staff

For its exceptional properties Medic Assistant finds use not only in homes for the elderly, but also in nursing homes, hospitals or rehabilitation centers.

It helps with the rehabilitation of patients with limited mobility after surgery and reduces the need for assistance of nursing staff.
